RE: Ozone Waste Solutions 05/18/2016 Incident Report

On 05/18/2016 at approximately 2:30pm while running a cycle of medical waste through the Ozonator waste treatment machine a malfunction occurred during the first cycle. A breach of pressure occurred. Knowing that the process requires the machine to be totally sealed, I removed the untreated waste and bypassed all of the remaining waste to Curtis Bay.

Everything was contained and there were no injuries. All was dealt with as per our Standard Operating Procedures. There was no hazard to the public or environment.

We are currently investigating and repairing the Ozonator. We will be operating as a Transfer Station until the Ozonator is up and running.

Regards,

Todd Kaufman
